ANAS ZAKIR ATTAR

Kalyan, Mumbai | 7021096181 | Hackeranas05@gmail.com | linkedin.com/in/anas-attar-400b062a8

PROFESSIONAL SUMMARY

Java Backend Developer (Fresher) and final-year Computer Engineering student, experienced in building API-driven systems with Spring Boot, with a growing focus on healthcare interoperability - designing HL7-to-FHIR pipelines that let hospital systems exchange patient data reliably. Comfortable owning a service end-to-end: modeling data, designing REST APIs, and writing validation and transformation logic. Backed by solid Data Structures & Algorithms and full-stack fundamentals from a production internship and independent projects.

TECHNICAL SKILLS

Programming Languages: Java, JavaScript (ES6+)

Backend: Spring Boot, Spring Core, Spring MVC, Spring AI, Node.js, Express.js, RESTful API Design

Frontend: React.js, HTML5, CSS3, Tailwind CSS

Databases: PostgreSQL, MySQL, MongoDB

Tools & DevOps: Git, GitHub, Docker, Redis, Postman, Maven, JUnit, VS Code

Core Concepts: Data Structures & Algorithms, OOP, Microservices, System Design, Agile/Scrum, CI/CD

Healthcare Interoperability: HL7 v2, FHIR Resource Modeling & Integration

Soft Skills: Problem Solving, Communication, Team Collaboration, Ownership, Adaptability

EXPERIENCE

Full Stack Developer Intern - Codec Technologies 1 month

- Engineered RESTful services and CRUD workflows for a live production app, replacing the client's manual spreadsheet tracking system 35% faster.
- Designed and implemented backend modules end-to-end (data models, APIs, business logic), cutting manual data-entry effort for day-to-day scheduling by roughly 30%.
- Partnered with a small cross-functional team in an agile setup to ship features iteratively across multiple release cycles within the internship period.
- Handled deployment of backend services, gaining hands-on exposure to taking a feature from design through to a working, deployed product.

EDUCATION

Bachelor of Engineering (B.E.) in Computer Engineering 2023 - 2027

Dilkap Research Institute of Technology and Management

Current CGPA: 7.41

Higher Secondary Certificate (HSC) 2023

Percentage: 60%

PROJECTS

HL7 to FHIR Integration Engine - Java, Spring Boot, PostgreSQL

- Built a healthcare interoperability engine that ingests HL7 v2 ADT messages and transforms them into standardized FHIR-compliant resources, enabling data exchange between disparate hospital systems.
- Implemented a parser and validation layer to check incoming HL7 messages for structural and content correctness before any transformation is attempted.
- Designed mapping logic converting validated HL7 data into FHIR Patient resources, exposed through a FHIR-compliant REST API.
- Used PostgreSQL for persistence and added error-handling around malformed or incomplete messages so failures are caught and reported rather than silently dropped.

JobConnect - Job Portal - MERN Stack (MongoDB, Express, React, Node.js)

- Built a full-stack job and internship portal with JWT-based auth and separate candidate/employer dashboards, including resume upload and application-status tracking.
- Designed RESTful APIs for job listings and profile management with MongoDB, backed by a responsive React.js + Tailwind CSS UI.

ACHIEVEMENTS

- HackCelestial 2.0: Qualified for Round 2 by clearing the initial ideation and technical screening phases.
- College Coding Competition: Secured 3rd Place among 50+ participants, demonstrating coding speed and logic.
- Technical Leadership: Conducted a peer-to-peer "MERN Stack" workshop, mentoring 20+ fellow students.
- DSA Mastery: Actively solving algorithmic challenges in Java on LeetCode and GeeksforGeeks.

LANGUAGES

English, Hindi
